Mr. Cooper Interview Experience

Kowshick Raj A C (7376221CS206)

Round 1 (3 hours):

Round 1 was a online round where 27 MCQ's where asked based on OOPS, SQL and Java Outputs, Only 3 were aptitude, MCQ consists 2,4,6 marks depending upon the question. 3 coding questions were asked 2 medium and 1 hard. Medium questions were 50 marks each and hard was 100 marks. Every coding question has 10 testcases. I solved most MCQs and 19 testcases combined in 2 medium and couldn't solve hard.

 Around 550 attended and 90 were moved to the next round.

Round 2 (2 ½ hours):

Round 2 was an in-person long coding round. 1st hour was the time to draw ER diagrams or as class diagram, need to write query for a SQL question with joins and also a architecture diagram. The last 1 ½ hours was to code, we were asked a loan management system (Loan apply, approve/reject, View loans, Pay EMI, Pay Principle). I have to draw ER for everything but code for only 2 selected by the panel member. Use OOPS oriented language.

Only 20 passed this round.

Best tip is to have a clear ER diagram and implement any oops concept in your code which will help you in the technical HR.

Technical HR 1:

It lasted for well over 45 mins and they grilled me in OOPS and DBMS. Learn OOPS fully and learn why to use them as well. They asked about abstract classes and interfaces and asked me to implement different types of functions in them. SQL was basically just joins. They asked me about my projects and why did I use those. Why use MongoDB when you can store anything in RDBMS and why flexible schema is needed are other questions that you have to look into.

These rounds were happening in 10 min breaks so I don't know how many people cleared this round. Maybe 8.

Technical HR 2:

It was a bit easier as DB Normalization was asked and I could normalize a table and they asked about my technologies, because I had docker and Kubernetes in my resume they were more ready to ask questions there so I didn't get many questions from OOPS. I still had to implement methods from the second round and explain them how my ER diagram works.

Only 4 cleared this round.

Personal HR:

It was just to assess your communication and your habits and will you be there in the long run, Just be confident when you speak, they were friendly and they asked me about my family and my experience coding.

All 4 got placed.

Conclusion:

Be confident in Interviews and be interactive with everyone. Make sure that you study OOPS and SQL before attending any round and be prepared to answer anything from your resume. Be confident when you answer, the HRs were friendly. Hope you do well for your placements.

Thank you.
